OTHER INFORMATION: A blank residue designated by
OTHER INFORMATION: "Xaa" is inserted after residue No. 70 of murine
OTHER INFORMATION: TNF and the sequence numbering is augmented by 1
OTHER INFORMATION: starting with residue No. 71 in order to maximize
OTHER INFORMATION: the sequence homology with human TNF.

of 7-17 contiguous amino acids derived from the Ser100-Glull6 region of human tumour necrosis factor-alpha (TNF-alpha), or Ser99-Glull5 region of mouse TNF-alpha, for treating oedema. The peptides form pharmaceutical compositions for treating oedema, especially pulmonary oedema. The peptides are non-toxic, whilst retaining the oedema resorption-inducing capacity as TNF. The present sequence represents a specifically claimed TNF-alpha circularised peptide from the presen
                                                                                                The present invention describes the use of peptides comprising a chain

The peptides form pharmaceutical compositions for treating oedema aspecially pulmonary oedema. The peptides are non-toxic, whilst retaining the oedema resorption-inducing capacity as TNF. The present sequence represents a specifically claimed TNF-alpha circularised peptide from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14-AUG-1998;

                                                                                                                                                                     Homo sapiens
                                                                                                                                                                                          Tumour necrosis factor alpha; TNF-alpha; human; mouse; oedema; proinflammatory; pulmonary oedema.
                                                                                                                                                                                                                           Tumour necrosis factor alpha
                                                                                                                                                                                                                                                  08-JUN-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes the use of peptides comprising a chain of 7-17 contiguous amino acids derived from the Ser100-Glul16 region of human tumour necrosis factor-alpha (TNF-alpha), or Ser99-Glul15 region of mouse TNF-alpha, for treating oedema. The peptides form pharmaceutical compositions for treating oedema, especially pulmonary oedema. The peptides are non-toxic, whilst retaining the oedema resorption-inducing capacity as TNF. The present sequence represents a murine TNF derived peptide used in an example from the present
                                                                                                   10-AUG-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes the use of peptides comprising a chain of 7-17 contiguous amino acids derived from the Ser100-Glu116 region of human tumour necrosis factor-alpha (TNR-alpha), or Ser99-Glu115 region of mouse TNF-alpha, for treating oedema. The peptides form pharmaceutical compositions for treating oedema, especially pulmonary oedema. The peptides are non-toxic, whilst retaining the oedema resorption-inducing capacity as TNF. The present sequence represents a specifically claimed TNF-alpha peptide from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      M and Q= H, isopropyl, CHMe.Et, phenyl, CH(OH), 3-indolyl- or 4-imidazoly-methyl or (CH2)bT; b=1-6; T= OH, MeO, MeS, isopropyl, phenyl (opt. 4-OH, substd.), HS, NH2, CONH2, or NH2 C (NH) NH; or M ans O together are (CH2)c-S-S-(CH2)d, (CH2)eCO NH-(CH2)f or (CH)2eNH CO(CH2)gNH CO(CH2) f; c and d=1-4; e and f=1-6; g=1-12. The peptide is a low mol. wt. deriv. of TNF. See also DE3841753-55, DE3841759, DE3841761-64, DE3841767-68.
                                                                                                                                                                                                                                                                                                                                                                                                                                   The amino acid sequence of a part of the 4th exon from the tumour necrosis factor (TNF)-alpha. The protein has the peptide AAR72454 attached to the N-terminal amino acid. The fusion protein can be used in pharmaceutical compositions for inhibiting metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAR72456 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                          The present invention relates to a formulation comprising Apo-2 ligand and divalent metal ions. Apo-2 ligand and the formulation are useful for treating cancers and viral infections. Addition of divalent metal ions for making Apo-2 ligand and formulations containing Apo-2 ligand results in increased yield and stability
                                                                                                                                                                                                                                                                                                                                                                         Use of divalent metal ions for making Apo-2 ligand and in formulations containing Apo-2 ligand for increasing yield and stability of ligand trimers, useful for therapeutic applications -
                                                                                                           Sequence
                                                                                                                                                          containing Apo-2 ligand results of Apo-2 ligand trimers.
                                                                                                                                                                                                                                                                                The present invention relates to a formulation
                                                                                                                                                                                                                                                                                                                               Disclosure; Fig 3; 60pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA sequence encoding hTNF was synthesised chemically and inserted into vector plasmid. Recombinant plasmid was cut with restriction enzyme and DNA fragment coding for new bioactive polypeptide was obtd. The new bioactive polypeptide has ten N-terminal AAs deleted. It has antitumour activity greater than hTNF and can be produced by culturing bacteria transformed with a plasmid contg. DNA encoding the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (GETH ) GENENTECH INC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             18-APR-2001

The invention in particular relates to methods for regulating the interaction between TALL-1 and TALL-1 receptors (BCMA referred as B cell maturation factor) to regulate monocyte, macrophage and B lymphocyte mediated immune responses. TALL-1 protein is useful for identifying compounds that regulate B lymphocyte proliferation. It is also useful for treating B lymphocyte associated autoimmune disorders like rheumatoid treating B lymphocyte associated autoimmune disorders like rheumatoid
